

# **Barnhart Construction Company**

**785 WALSH AVENUE, SANTA CLARA, CALIFORNIA 95050 TELEPHONE: 296-7550**

Barnhart Construction Company was founded in 1948 and incorporated in 1952 in its present business structure. Our original business philosophy was simple: deliver a good job, on or ahead of schedule, and do it with honesty and sincerity. This premise has never changed and it has earned us a reputation for solid performance and high integrity. Whether through competitive bidding or negotiated contracts, Barnhart Construction Company is fully equipped and qualified to perform any feasible project within the building and related engineering field. On single responsibility type negotiated contracts Barnhart Construction Company prefers to engage Architects and Engineers, in private practice, who we feel are best adapted to the clients particular job. All the advantages of the single responsibility contracts, i.e., speed, low cost and tight control of all elements of the planning and building team accrue to the Owner. Yet

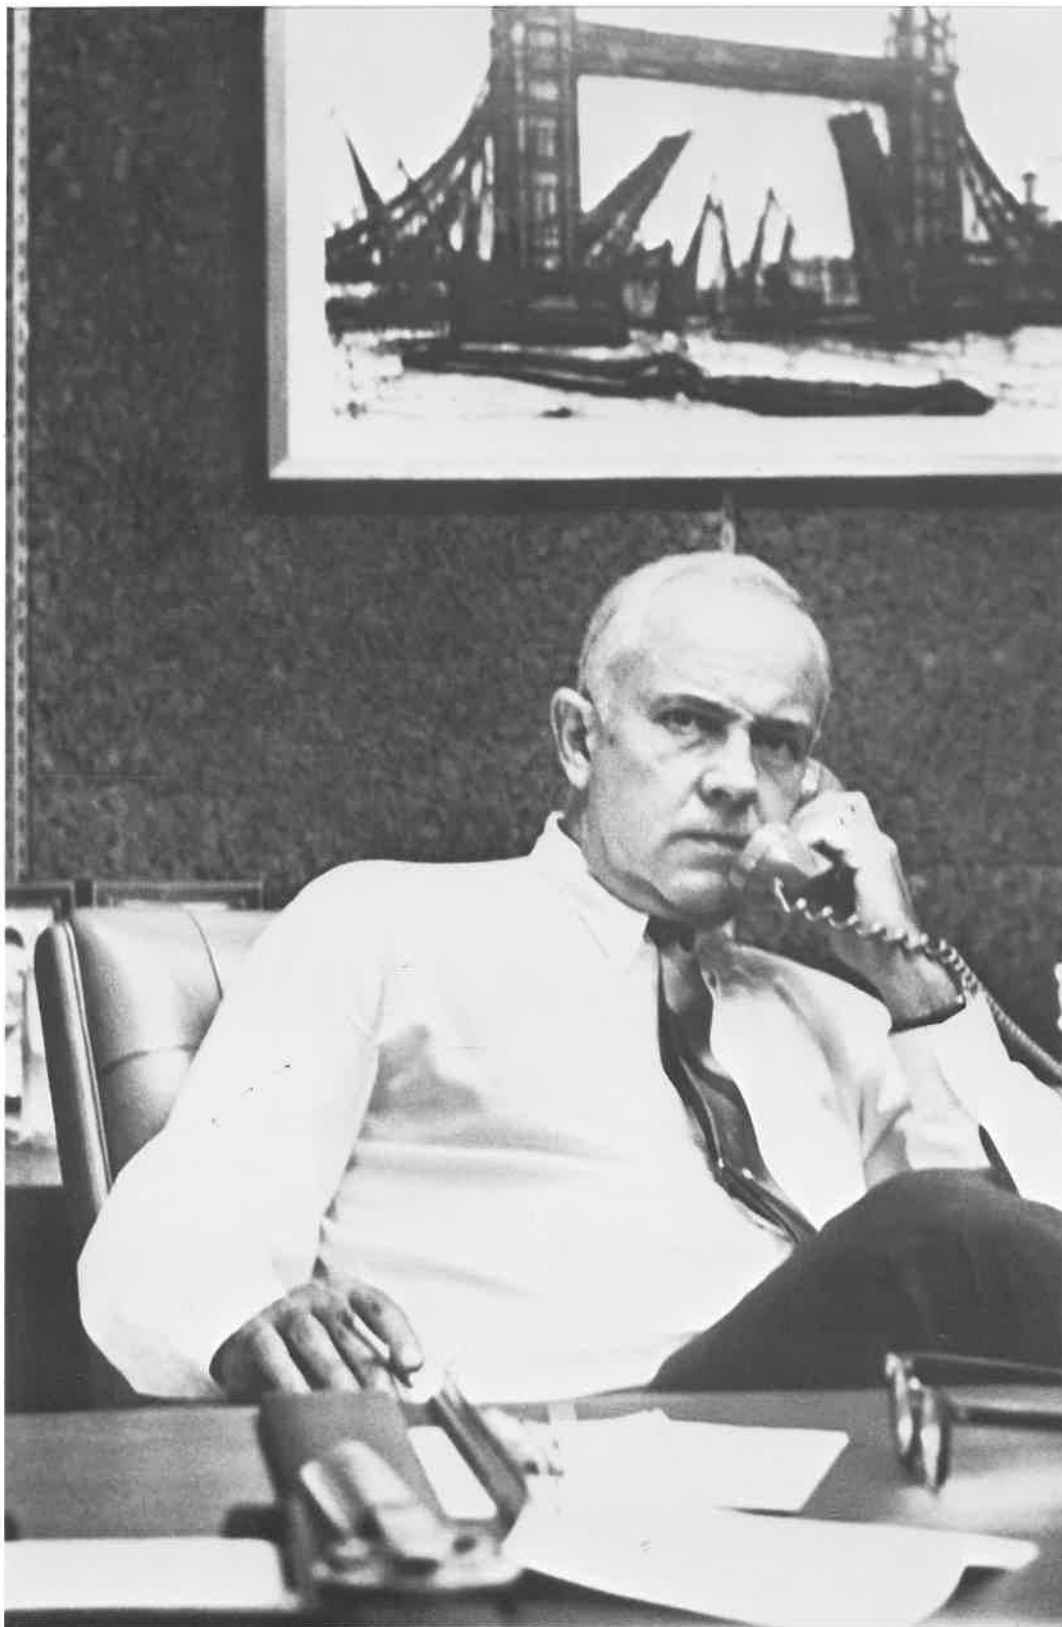

the Owner knows that he is getting talent which has proved itself on this particular type work. We have successfully completed projects using this concept, for highly satisfied clients, in the State of Florida and throughout California. These have been "Turn-Key" projects including feasibility studies, land acquisition, construction, equipment installation, start-up, operations and maintenance. Our services in the field of feasibility studies and budget estimates/ scheduling and programming/ contract management/ and total project supervision are administered by a highly competent team of construction professionals with a record for long and outstanding service with the Company. Our eleven key field superintendents have averaged 15 years service with Barnhart Construction Company. We are proud of their record and the stability accruing from long service under the same supervisory staff these men take pride in their service in the field of accident prevention and labor relations. Accident prevention is recognized by the Company as an integral part of efficient operations in addi-

tion to recognizing the far reaching moral obligations for employee safety. We are equally cognizant of the importance of satisfactory labor relations and proud of our record for harmonious dealings with the craft unions involved and our unbiased administration of union agreements.

The roster of projects that have been built by Barnhart Construction Company are partially shown on the following pages. We have attempted to graphically illustrate the scope of projects completed by the following categories:

- 1) Commercial & Industrial
- 2) Municipal & Educational

These projects vary in magnitude and complexity from single structure short duration projects to the \$11,000,000.00 complex of buildings housing the De Anza College in Cupertino, California which we completed in 19 months.
